self management social awareness, reproductive and sexual anatomy also known as sex anatomy includes the sex organs on the outside of your body and the sex and reproductive organs on the inside of your body. Some examples of sex organs are the vulva which includes your vagina and penis. A full term pregnancy lasts approximately 270 days, approximately 38 5 weeks from conception to birth because it is easier to remember the first day of the last menstrual period (LMP) than to estimate the date of conception. Obstetricians set the due date as 284 days, approximately 40.5 weeks from the LMP.

Ovulation is the release of the egg from the ovary between about days 12 to 16. A woman will become pregnant if fertilisation of the egg and the sperm occurs several days after ovulation when the egg is in the fallopian tube. During pregnancy, menstruation, human fetal development slides from slideshare.com from conception to birth teaching the reproductive system.

Objective: To identify the basic components of the human reproductive system and describe the basic functions of the various components. For example, fertilisation, conception, human reproduction normally begins with copulation followed by nine months of pregnancy before childbirth, though it may be achieved through artificial insemination. Many years of parental care are required before a human child becomes independent, typically between twelve and eighteen or more.

Female reproductive system physiology: The female reproductive cycle is the process of producing an ovum and readying the uterus to receive a fertilized ovum to begin pregnancy. If an ovum is produced but not fertilized and implanted in the uterine wall, the reproductive cycle resets itself through menstruation.

Use reproductive system worksheets 3 and or 4 to reinforce new terminology. Use reproductive system worksheet 5 as a large group exercise to reinforce understanding of the reproductive process. Use reproductive system worksheet 6 to further reinforce activity 2 above.

This lesson was most recently edited August 2009.

Anatomy of the female reproductive system: The female reproductive system is responsible for supporting and monitoring conception, pregnancy, the menstrual cycle, and sexual maturation. The system comprises external structures and internal reproductive organs and glands that mature with age.

Structure of women with pregnancy: The system comprises external structures and internal reproductive organs and glands that mature with age.
to identify the parts of the male and female reproductive systems and relate them to hormonal changes and puberty day three pregnancy objective students will be able to describe human development from conception to birth, induction of birth as cervic softens baby drops down onto cervix lightening about 2 weeks prior to birth first pregnancy can occur at labor in subsequent pregnancies a few hours prior to birth engagement of the presenting part occurs head of baby drops down into pelvic girdle, lesson plan and activities for year 7 on pregnancy lesson covers stages of development in the foetus as well as new key words and diagrams includes an afl plenary task, pregnancy lesson explain todays class will build on knowledge learned about reproduction and focus on pregnancy while we could spend a whole week on this subject today we will cover some of the basics about pregnancy including how pregnancy happens symptoms and where to go for a pregnancy test 2 briefly cover the process of conception, learners with mild to moderate disabilities discuss human reproduction and the importance of preventing pregnancy they review reproductive anatomy sexual decision making and what birth control is the lesson concludes with a, understand how female and male reproductive anatomy works and what steps they need to take to protect their sexual health and fertility briefly explain the concept of a question box to your students ask them to spend a few minutes thinking about some questions they already have about sexuality conception pregnancy and birth, gt lesson 01 reproductive anatomy and physiology this lesson is divided into two sections the female and the male reproductive systems understanding these two systems is the basis for understanding pregnancy itself, in the reproductive process a male sperm and a female egg provide the information required to produce another human being conception occurs when these cells join as the egg is fertilized pregnancy begins once the fertilized egg implants in the uterus the embryo grows and becomes surrounded by structures that provide support and nourishment, unit 6 human reproduction authorstream presentation unit 6 human reproduction authorstream presentation pubic bone urethra clitoris shaft glans prepuce labia minora labia majora reproductive anatomy of the human female embryonic development and birth 6 conception embryonic development and birth an egg develops into an, lesson plan sexual amp reproductive anatomy and physiology part i this lesson is enhanced when learners have the following background knowledge content from the international technical guidance on sexuality educationkey concept 4 human development 4 1 sexual and reproductive anatomy and physiology level i, we ve reached the grand finale of our four part series on
